Summary:

Multitalented, self-motivated and gifted junior developer with the experience in full project life cycle from design to implementation to integration. Capable of finding reliable solutions for software issues. Experienced in JavaScript and Python programming languages and offering skills in html,css, postgresSql, react, nodejs, express and es6 middleware. True team player with strengths in adaptability, accuracy and attention to detail. I am the proud recipient of the Maine Corps Good Conduct Medal, 2X Sea Service Deployment Ribbon, Iraq Campaign Medal with 1 Bronze Service Star, Global War on Terrorism Service Medal, National Defense Service Medal, Letter of Appreciation, 2X Rifle Qualification Badge award.

Portfolio

- Travel America Brew app: www.https://github.com/burke3601/central-command-7
  - This project is a reactive application in which a user is able to find the nearest brewery recommendations based on the city and state input. Based on the user's input, the user will also receive the current weather in the searched city as well as the brewery recommendations will be based on the current weather.
  - This project was created by a team of four members. My role in this project was to retrieving specific data from the three APIs that are utilized in this project and importing that data into the HTML webpage. I also was a huge contributor with creating the CSS styling of the webpage.
  - For this project, we used python3, css and html5
